

Canine Medication Testing

Veterinary Drug Screening and Confirmation
by LGC

Introduction

LGC provides a canine screening and confirmatory service to independent veterinary practices.

Why test?

Ensure health & transparency: Uncover medications that may mask injuries or ailments during vetting.

Our broad-spectrum testing covers multiple drug classes in urine, blood and hair, including but not limited to:

- Anabolic steroids and selective androgen receptor modulators
- Elemental analyses, including cobalt and arsenic
- NSAIDs
- Corticosteroids
- Sedatives & Tranquillisers
- Antihistamines
- Beta Blockers
- Stimulants
- Bronchodilators

Drug screening findings can be followed up with forensic confirmatory analysis, if required. LGC can also provide tamper evident collection kits which are designed to maintain sample integrity and support the chain of custody record.

Why LGC?

- Operational since 1963: Decades of trusted expertise in drug surveillance, servicing many horseracing and greyhound regulators such as Federation Equestre Internationale (FEI), British Horseracing Authority (BHA), Irish Horseracing Regulatory Board (IHRB), Veterinary Defence Society (VDS), Greyhound Board of Great Britain (GBGB) and a range of Bloodstock Sales Houses and Veterinary practices.
- Global leader: Fordham-based International Federation of Horseracing Authorities (IFHA) reference laboratory with over 100 expert scientists.
- Trusted in sport & welfare: Recognised worldwide for equine, canine, human & supplement drug testing.

Drug screening findings can be followed up with **forensic confirmatory** analysis, if required.
